1. LU CIETVIELU FIZIKAS INSTITŪTA DARBĪBAS ILGTERMIŅA UN VIDĒJA TERMINĀ MĒRĶI

Izveidot LU CFI par vadošo pētniecības centru funkcionālu materiālu un nanotehnoloģiju jomā Latvijā un atzītu pētniecisko iestādi Eiropas Zinātniskajā telpā, kur augsta līmeņa zinātniskā darbība (gan fundamentālie pētījumi, gan praktiskās ievirzes pētniecība) ir organiski apvienota ar augstas kvalitātes akadēmiskajām un profesionālajām studijām.

Mērķi analizēti „LU CFI vidēja termiņa darbības stratēģijā” – dokumentā, kas ir apstiprināts LU Senātā.

2. JURIDISKAIS STATUSS UN STRUKTŪRA

Latvijas Universitātes Cietvielu fizikas institūts ir dibināts 1978.gadā uz divu LU laboratoriju bāzes. No 1986.gada Institūts ir juridiski patstāvīga iestāde (bezpečīgas organizācija) pie LU.

No 2006.gada 12.aprīļa LU Cietvielu fizikas institūts tika pārveidots par Latvijas Universitātes aģentūru „LU Cietvielu fizikas institūts”. LU Cietvielu fizikas institūts atrodas LU pārraudzībā un darbojas saskaņā ar Zinātnes likumu un Publisko aģentūru likumu.

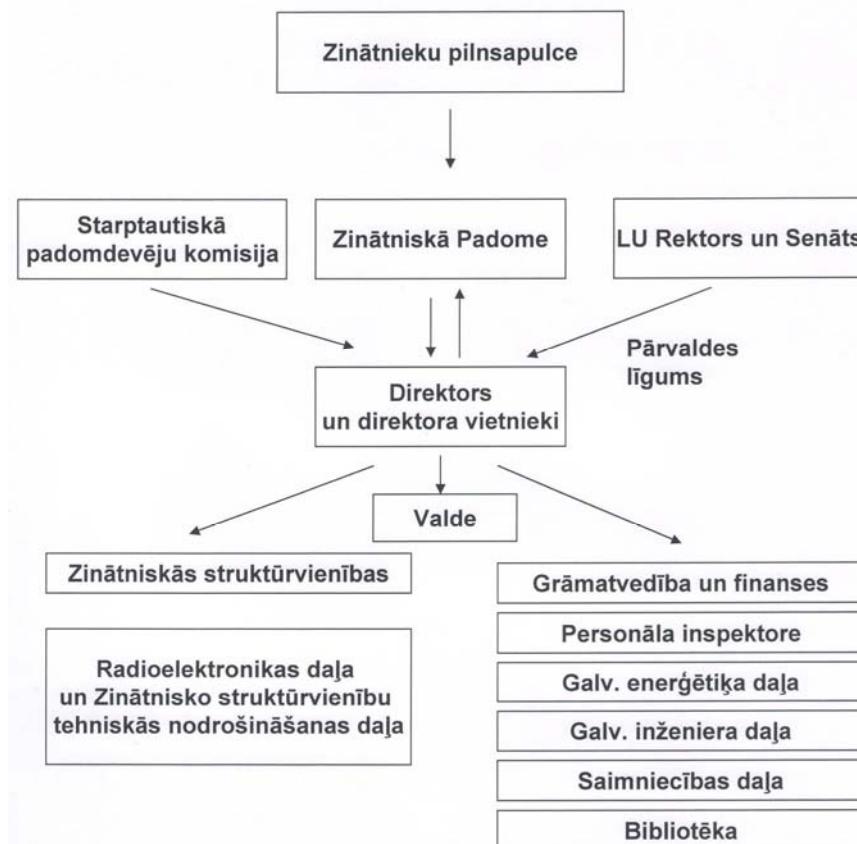

LU aģentūra „Latvijas Universitātes Cietvielu fizikas institūts” ir reģistrēta LR IZM Zinātnisko institūciju reģistrā (apliecības Nr. 351016, 08.06.2006.).

Padotībā esošo iestāžu – nav.

Institūta strukturālā shēma ir pievienota 1.tabulā

**EVALUATION REPORT
of the International Supervisory Board
on Research, Education and Development activities
of the Institute of Solid State Physics, University of Latvia**

Board meeting, Riga, Latvia, April 3, 2007

Overview

Institute of Solid State Physics (ISSP), University of Latvia was established on the basis of the University's two Laboratories: Semiconductor Physics and Ferro- and Piezoelectric Physics – in 1978. Since 1986 the ISSP had the legal status of an independent scientific institution of the University, but was reorganized as agency of the University of Latvia in 2006.

The research activities of ISSP include:

- studies of electronic and atomic processes in wide-gap materials with different degree of structural ordering and chemical composition;
- development of new inorganic and organic materials (single crystals, polymers, glasses, ceramics, thin films) for optics and electronics;
- design and manufacturing of scientific instruments and devices for analytical tasks, environmental monitoring and energy storage;
- vision research, development of new technologies for psychophysical testing and primary vision care.

The highest decision-making body of the ISSP is the Scientific Council of 21 members elected by the employees of the Institute. The total staff number of the ISSP is 222, including 32 Habilitatus Doctors of Sciences, 54 Doctors of Sciences and 55 students.

The research activities of the ISSP in 2006 were reflected in 180 publications in the internationally recognised scientific journals. The Institute obtained 21 research grants from Latvian Science Council, participated in 4 trans-institutional co-operation projects, supervised the National Research Programme (NRP) in “Material sciences”, and collaborated in the NRP “Energetics” with total financing of 418 thousand Latvian lats (LVL, 1 EUR = 0.703 LVL) in 2006. The total amount of various contract works and market-oriented research projects in 2006 was 143 thousand LVL. In addition, 281 thousand LVL were received for basic staff salaries and for maintenance of infrastructure.

The ISSP carries out RTD projects in co-operation with technology-oriented Latvian enterprises, e.g., Sidrabe, Alfa, Alfa Pro, Baltic Scientific Instruments, Valmieras Stikla Skiedra (Valmieras glass fibres). Two SMEs (Hologramma Ltd., Dardedze Holografija Ltd.) are established at the Institute as a spin-off of research projects.

Energy efficiency of the building was improved by a large-scale reconstruction work in the laboratory part of the Institute's building as part of the state investment project (total sum of 581 thous. LVL). Thermal insulation of the outer walls and windows was improved, a new double-pitch roof was constructed, and the interior was partially renovated improving energy efficiency and making the working conditions in the Institute more comfortable.

From the beginning of 2001 the ISSP has the status of the European Commission (EC) Centre of Excellence for Advanced Material Research and Technologies (CAMART) with the following main tasks:

- promote restructuring of the science and technology sectors in Latvia;
- attract young researchers;
- collaborate with the European colleagues.

The research activities in the CAMART are carried out in the following main fields:

- functional disordered materials;
- theory and modelling;
- advanced ferroelectric materials;
- solid state ionics and devices;
- materials for vision science.

In the period 2001- 2004 these activities were supported by EC funding of 492 thousand LVL. Several EC projects (EURATOM, X-TIP, MIND) are continuing in the ISSP, amounting to 245 thousand LVL in 2006. This sum includes co-financing from the Latvian government. Including the EU structural funding for scientific equipment, the total funding for the ISSP in 2006 was 1586 thousand LVL. ISSP continues to participate in EU network on materials research ERANET MATERA.

The ISSP has recently intensified its teaching activities. Four research staff members of the Institute have been elected as professors of the University of Latvia, and three others - as professors of Riga Technical University and the University of Daugavpils. Postgraduate and graduate curricula are offered in solid state physics, material physics, chemical physics, physics of condensed matter, semiconductor physics, and in experimental methods and instruments.

Achievements

- 1) In the period since the first International evaluation (18.08.2002.) the overall development of ISSP has been good with excellent quality of research as evidenced by publications in internationally recognized journals, numerous citations, active participation in international projects etc. The average salary of scientific staff was recently (2006) significantly increased to 611 LVL/month, surpassing for the first time

the average salary in Latvia (around 300 LVL/month). This makes it now possible to attract young researchers to work in the ISSP.

- 2) In the last two years the renovation of scientific infrastructure was started and a number of modern scientific instruments have been acquired with a total investment of around 1.5 Mil. LVL.
- 3) An internationally recognized research group working in the field of organic semiconductors has joined the Institute with its staff and equipment in 2006.
- 4) According to the official data of the EC National Contact Point in Latvia, ISSP is the most active participant in international projects as compared with other national scientific institutions in Latvia.
- 5) The ISSP has increased its participation in higher education at the universities of Latvia.

Critical Issues

- 1) The average age of research staff in the ISSP is around 54 years, therefore there is an urgent need for a new generation of researchers.
- 2) The increase in research funding has an unfortunate side-effect of increasingly complex and time-consuming project management, both concerning Latvian and EC projects. This frequently forces project leaders to devote the bulk of their time to formal issues and makes it problematic for them to do active scientific investigations.
- 3) The project funding payments have been delayed in some cases, conflicting with the project time – planning and reporting schedules.
- 4) The ISSP should play a more active role in the science popularization (communication) activities, particularly addressing the younger generation starting with school-age children.

Recommendations

- 1) To guarantee the high internationally competitive level of scientific research in the ISSP, it is necessary to continue allocation of additional financial resources from the state budget of Latvia and EU Structural funds. This funding is needed both for reasonable salaries to attract and involve additional excellent scientists (young generation and researchers from abroad) and to further improve the scientific infrastructure to the internationally competitive level.
- 2) The ISSP must play a more active role in the fulfilment of the National Research Programmes, including the education of corresponding specialists.
- 3) Further development of modern scientific infrastructure with estimated cost of 15 Mio LVL is needed in ISSP for acquiring new and updating the existing equipment, and for

laboratory renovation. Apart from improving the research capability, this will help to develop a modern research base for PhD students in material sciences.

- 4) Strong contacts of the ISSP with international large-scale experimental centres are highly desirable to promote the research activities to the highest level and expand scientific collaboration. In particular, a participation of the ISSP in European Synchrotron Radiation Facility (ESRF), located in Grenoble (France) and operating the most powerful synchrotron radiation source in Europe, should be a strategic goal, which will open an access for the ISSP staff to a first-class scientific environment for conducting experiments at the cutting edge of modern science.
- 5) For a variety of reasons, project payments have been delayed in the past, hampering the work. While this should be avoided, such unpredictable delays can still happen in the future. Therefore, for efficient work, national resources should be made available as an emergency buffer, which would help to bridge financial "holes" in case of delayed project payments.
- 6) To avoid inflexibility inherent to large hierarchical organizations, ISSP should acquire legal status of self-governed semi-autonomous scientific institution associated with the University of Latvia. This status would facilitate an efficient research work by minimizing efforts and resources spent on purely formal issues and would significantly streamline the processes of preparing proposals and the subsequent signing of contracts.
- 7) A sound long-term recruitment plan for staff members must be worked out for the ISSP.
- 8) ISSP should further increase efforts in public relations by promoting knowledge and technologies in public media and society, particularly among the younger generation, by explaining the significance of sciences for the long-term development of Latvia.
