Tika iegūti ar Cr<sup>3+</sup> aktivēti CaAl<sub>12</sub>O<sub>19</sub> luminofori, izmantojot augsttemperatūras cietfāžu sintēzes metodi. Ar elektronu paramagnētiskas rezonances spektroskopijas metodi ir identificēti trīs Cr<sup>3+</sup> paramagnētiski centri ar atšķirīgiem lokālās struktūras parametriem. CaAl<sub>12</sub>O<sub>19</sub>:Cr<sup>3+</sup> paraugos tika novērotas fotoluminiscences joslas spektra sarkanajā daļā ar maksimumiem pie 689 un 700 nm, kas atbilst spina aizliegtai <sup>2</sup>E → <sup>4</sup>A<sub>2</sub> pārejai, un spektra infrasarkanajā daļā plata emisijas josla ar maksimumu pie 785 nm, kas atbilst spina atlautai <sup>4</sup>T<sub>2</sub> → <sup>4</sup>A<sub>2</sub> pārejai. Arī luminiscences ierosmes spektri un dzišanas kinētika joslām pie 689, 700 un 785 nm norāda uz to, ka fotoluminiscences spektrs sastāv no 3 dažādām spektrālajām komponentēm.

Referātā tiks aprakstīti trīs dažādi Cr<sup>3+</sup> luminiscences centri CaAl<sub>12</sub>O<sub>19</sub>:Cr<sup>3+</sup> un apspriestas to īpašības.

## **Luminescence and EPR of Cr<sup>3+</sup> centres in CaAl<sub>12</sub>O<sub>19</sub>**

In this study, a series of Cr<sup>3+</sup>-activated CaAl<sub>12</sub>O<sub>19</sub> phosphors was synthesized by employing the high-temperature solid-state reaction method. Three Cr<sup>3+</sup> paramagnetic centres with different local structure parameters were identified by electron paramagnetic resonance spectroscopy. CaAl<sub>12</sub>O<sub>19</sub>:Cr<sup>3+</sup> exhibited red narrow-band emission with maxima at 689 and 700 nm attributed to the spin-forbidden <sup>2</sup>E → <sup>4</sup>A<sub>2</sub> transition and broadband infrared emission with maximum at 785 nm originating from the <sup>4</sup>T<sub>2</sub> → <sup>4</sup>A<sub>2</sub> spin-allowed transition. Excitation spectra and time-resolved spectroscopy monitored at 689, 700 and 785 nm revealed that photoluminescence spectra are a mixture of 3 different spectral components.

In the report three different Cr<sup>3+</sup> luminescence centres are characterized in CaAl<sub>12</sub>O<sub>19</sub>:Cr<sup>3+</sup> and its properties are discussed.
